Re: Your request for access to information under Part II of the *Access to Information and Protection of Privacy Act, 2015* (File #: PB/539/2019)

On July 15, 2019, Nalcor Energy received your request for access to the following records/information:

The North Spur is a hill 1,000m long which comprises part of the natural dam at Muskrat Falls, a dam which is both an advantage of the site, as well as its Achilles Heel. When the Muskrat reservoir is filled, this hill will form a natural dam containing the reservoir. The hill consists of two layers of sand, and two layers of glacio-marine clays, sloping downstream. The clay can liquefy when disturbed or when it becomes saturated with water. There are numerous quick clay slides on the North shore upstream and downstream of Muskrat, including three large slides on the downstream slope of the North Spur.

re if North Spur collapses provide

1/ details of North Spur insurance

2/a/ is there liability insurance?

b/ if so how much?

c/ If not why not?

3/how would the 164MW free MF power bloc to Nova Scotia be affected by a North spur collapse?

4/Re Emera LIL - Emera ROE True Up clause requires Nalcor to pay Emera if their LIL ROE is less than 8.5% after tax (or other regulated rate set by NL PUB after tax for 50 years for any reason) How is this affected if North spur collapses?
