Re: Your request for access to information under Part II of the *Access to Information and Protection of Privacy Act, 2015* (File #: PB/771/2019)

On October 11, 2019, Nalcor Energy received your request for access to the following records/information:

Re: Labrador Load

Reference: Synapse Energy Economics Inc. - Phase 2 Report on Muskrat Falls Project Rate Mitigation

Page 4 reference: "As reflected in a load duration curve, the need for the highest level of available generation resources occurs over relatively few hours of the year. In short, there is significant headroom for consuming surplus energy, or selling excess energy externally, without undermining the requirement to meet the Province's peak load during the coldest periods of the year. Careful attention must be paid to peak period load consumption and incentives to lower such peak demand.

Critically, we also assume a need to reduce peak load during winter periods and assign value to all efforts that lead to a reduction in peak load. Thus, peak load reduction associated with demand-side measures attracts a value equal to avoided capacity costs."

Page 30 reference: "The NLH forecast for Labrador projects relatively flat consumption through 2030, as shown in Table 9. However, the industrial load may change during that time frame. Some new industrial customers have been approved, and there are some potential new ones as well. For the LIS, the Wabush Mines are being reactivated with loads of 55 MW (peak) and 430 GWh per year. There are other new potential loads of 50 to 165 MW which would represent a significant increase for Labrador. Typically, these industrial loads have high load factors and remain in operation during the winter peak periods. Some, however, participate in demand reduction programs."

Re Nalcor Atipp Dec 24 2018 (previous ATIPP response attached) - Nalcor has stated no cost Churchill Falls recall was assumed for 50 years (PB-32-2018) for 76 MW to fill the LIL to 900 MW capacity (MF 824+ 76 MW recall)

Re NLH forecast for Labrador load to 2030 - "relatively flat."

Re Synapse Labrador forecast - Wabush 55MW peak other potential loads of 50 - 165 MW

1/ What is the impact on Island rates if Synapse's higher Labrador load occurs (increased MF mitigation costs)?

2/ What is the impact on external market sales revenue?

Please note that there are currently no records responsive to your request.
